Subject: Re: Followup Comments - ADAGE Preliminary Final Permit

Al and david

Thanks for your time yesterday. We are talking internally about the two specific issues we discussed on our call yesterday. I would like to confirm the following changes will or can be made to the preliminary final permit

1) Permitting note on page 8 which will clarify that covers on the conveyors that extend down to the belt are considered enclosed and that we are allowed to have a section or sections of unclosed conveyor belt to allow for visual inspection of wood and removal if unacceptable

2) Please remove the word "and" between conveyor transfer and drop points. The source of potential emissions is the conveyor transfer drop points.

3) Page 13 please add note that pm grain loading limit is for filterables only. We will also provide you with an estimate of what that grain limit is expressed in lb per hour.

4) Page 20 remove reference to 63.548 on condition 15

5) Appendix cems 1. Hcl cems language should be consistent with page 14 of the permit condition d

We will followup shortly on the remaining issues

Please confirm the items above have been incorporated in the permit

Thank you

Steve
