

GEBF 2017 cycle – one project proposal

- Enhanced Assessment of Gulf of Mexico Fisheries (Phase V)
 - Builds upon and expands the GEBF investments in both fisheries-dependent and -independent data collection
 - Focuses on reef fish (e.g., red snapper) that have historically been subject to overfishing and habitat loss
 - Addresses the lack of sound data related to both catch effort and population levels.
 - Improves effective management of GOM reef fisheries
