C Project Description

Please provide more information about the proposed project. (Limit 2,750 characters.)

During the Deepwater Horizon Oil Spill, stormwater runoff systems and uplands were compromised during high tides. There are also areas of Gulf County which still have septic tank systems located very near the coastline.

This project would allow testing of water quality and provide for design and construction of major stormwater retrofit projects to offset quality impacts resulting from the Oil Spill, and would allow for extension of sewer services to all areas located near the coastline and/or near water bodies affected by tidal flow to mitigate leaching of oil product into drainfields and spreading into groundwater/natural water tables.
