| | | | <i>Affected Area</i> 700 acres |

C Project Description

Please provide more information about the proposed project. (Limit 2,750 characters.)

The 1st Baptist Church Drainage Improvements Project is designed to improve the water quality of Boggy Bayou and the Choctawhatchee Bay Water shed. Boggy Bayou is a brackish water system that borders the west and south boundaries of Niceville and a major tributary of the Choctawhatchee Bay System. Boggy Bayou provides substantial economic benefits to the residents of Niceville, Valparaiso and Okaloosa County. The bayou provides for a variety of commercial and residential activities such as fishing, boating and swimming. These water bodies also enhance residential aesthetics, property values, tourism and public health. These water ways must be protected from harmful pollutants. The proposed project site is located on the shore line of Boggy Bayou along Bayshore Drive between Partin Drive and 31st Street. There is no stormwater management, water quality treatment and limited conveyance for this part of the city. The stormwater runoff generated from these roadways and the surrounding development discharges into the bayou untreated. This untreated storm water run off contains harmful pollutants, debris and sediment which adversely affect the water quality of Boggy Bayou and Choctawhatchee Bay. This poses a serious threat to the commercial, recreational and economic use of these water bodies.

This drainage improvement project would include the construction of a new closed conveyance system to capture and transport the run off to a proposed stormwater management facility. The proposed facility would be a stormwater vault located west of the intersection of Bayshore Drive and 31st Street. The treatment vault site is adjacent to the shoreline on city owned property and easily accessible for maintenance. The project is designed and ready for environmental permitting. The engineering estimate for this project is 432,000.00.
