## OPERATION CLEANSWEEP

Collection of Canceled, Suspended, and Unusable Pesticides

Progress Report for Fiscal Year **2007 – 2008**

A Cooperative Project Involving:

Florida Department of Agriculture & Consumer Services  
Florida Department of Environmental Protection  
University of Florida - Institute of Food & Agricultural Sciences  
& the Florida Cooperative Extension Service  
United Agri Products, Inc.  
The Central Florida Regional Planning Council

-----

Certified Pest Control Operators  
Florida Citrus Mutual  
Florida Fertilizer & Agrichemical Association  
Florida Farm Bureau  
Florida Fruit & Vegetable Association  
Florida Nursery Growers & Landscape Association  
Florida Pest Management Association  
Florida Tomato Committee  
Florida Turf Grass Association  
Florida Forestry Association  
Florida Peanut Producers Association  
Florida Soybean Producers Association  
Florida Landscape Maintenance Association  
Florida Golf Course Superintendents Association  
Florida Sod Growers Association

Progress Report - Operation Cleansweep  
Fiscal Year **2007-2008**  
Collection of Cancelled, Suspended, Unusable Pesticides

Introduction

Pesticides that can no longer be used as intended must be disposed of properly to prevent pollution of soil and water resources and unacceptable exposures to humans and wildlife. Pesticides become unusable as a result of regulatory action (cancellation or suspension of registered uses), or as a result of impairment of the product itself while in storage - such as expired shelf life, crystallization of a liquid in cold temperatures, or solidification of a dust formulation. Pesticide end-users may also no longer have a use for the pesticide, even if it is in usable condition.

Pesticide users face difficult choices when dealing with the unusable products - proper disposal may involve high costs or difficult regulatory requirements. When faced with an amount of unusable product, the easiest solution is generally to keep it in storage. However, long term storage presents a risk as well. Containers may leak, break or otherwise degrade. Property ownership changes and stored products may be acquired by people who are unaware of how to handle them. Labels deteriorate and become difficult to read, thus leaving the contents unidentifiable and unusable. Additionally, the threat of exposures to employees, contact with surrounding communities, and releases to the environment through soil, surface water or air, are other potential hazards associated with long term storage.

In order to address this problem in Florida, the Department of Environmental Protection (DEP) and the Department of Agriculture & Consumer Services (DACCS) have teamed with the University of Florida's Institute of Food & Agricultural Science, Florida agricultural marketing groups and pesticide user groups to develop and implement "Operation Cleansweep," a program for collection and proper disposal of cancelled, suspended, and unusable pesticides (CSUP). Following a **1995** statewide collection of **70,000** pounds of lead arsenate, these agencies and user groups were able to conduct several small scale CSUP collections in a four county pilot project (**1996-1997**). One additional collection was also held in **1998**. These efforts resulted in a collection of a total of **52,000** pounds of CSUP materials from more than **220** participants.

In State Fiscal Year (FY) **2000-2001**, DEP received funding as part of the General Appropriations Act to start an ongoing pesticide collection program. This program, Operation Cleansweep, was funded by an appropriation from the Solid Waste Management Trust Fund at a level of **\$300,000** for FY **2000-2001**. A total of **235,644** pounds of CSUP material were collected from **374** participants in ten one-day collection events. In FY **2001-2002**, the program was funded for **\$300,000** and a total of **224,000** pounds of CSUP was collected from **357** participants. In FY **2002-2003**, DEP received funding by an appropriation from the Solid Waste Management Trust Fund at a level of **\$200,000**. A total of **126,235** pounds of CSUP material was collected from **145** participants.

In FY **2003-2004**, DEP again received funding by an appropriation from the Solid Waste Management Trust Fund at a level of **\$100,000**. In addition, the Central Florida Regional Planning Council was awarded a FEMA grant, administered through the Florida Department of Community Affairs (DCA) which totaled **\$225,000**. This funding was used in conjunction with that from the State of Florida totaling **\$325,000**. A total of **250,984** pounds of CSUP material was collected from **207** participants. In FY **2004-2005**, DEP received funding by an appropriation from the Solid Waste Management Trust Fund at a level of **\$100,000**. A total of **78,887** pounds of CSUP's were collected in Florida from **55** different participants. In FY **2005-2006**, DEP received funding by an appropriation from the Solid Waste Management Trust Fund at a level of **\$100,000**. A total of **89,000** pounds of CSUP's were collected in Florida from **104** different participants. As of **May 19, 2006** there are requests from **14** Florida counties needing pickups next year (See attached map of Cleansweep Requests for Assistance for **2006-2007**). In FY **2006-2007**, DEP received funding by an appropriation from the Solid Waste Management Trust Fund at a level of **\$100,000**. A total of **68,994** pounds of CSUP's were collected in Florida from **138** different participants. In FY **2007-2008**, DEP received funding by an appropriation from the Solid Waste Management Trust Fund at a level of **\$100,000**. A total of **82,895** pounds of CSUP's were collected in Florida from **144** different participants.

## Program Organization & Implementation

Operation Cleansweep continued with a Steering Committee composed of representatives from the DACS, DEP, the University of Florida Institute of Food & Agricultural Sciences (IFAS), the Florida Fruit & Vegetable Association, Florida Farm Bureau Federation, Florida Fertilizer & Agrichemical Association, Florida Citrus Mutual, Florida Pest Control Association, Florida Landscape Maintenance Association, Certified Pest Control Operators of Florida, Turf Grass Association, Florida Nurserymen & Growers Association, Florida Golf Course Superintendents Association and Florida Sod Growers Association.

The collection program is open to pesticide end-users from the agricultural, nursery, golf course, greenhouse, and pest control industries. Businesses in these industries can dispose of cancelled, suspended, and other-wise unusable pesticides free-of charge through this program. Pesticide distributors and retailers can participate in the program by paying the contract price (price-per-pound) of **\$1.12** for CSUP disposal. The Cleansweep Steering Committee has agreed to allow government/public agencies, that call for Cleansweep services, to be put on the list, but will be placed in a low priority category. If Cleansweep funds remain when all private agricultural entities that were on the list have received service, governmental/public agencies will be serviced at the following rate: The first **500** pounds of CSUP will be managed utilizing Cleansweep funds. If more CSUP, over the initial **500** pounds, exists, the agency requesting service will be responsible for paying for the management of this “excess” material at the contracted rate. Additional requests will be handled on a case by case basis, based on the degree of eminent danger to public health and safety and the potential for environmental harm.

The Department of Environmental Protection (FDEP) asked the Department of Agriculture & Consumer Services (FDACS) to handle contracting and oversight of the project due to its familiarity with the pesticide end-user community. FDACS issued an Invitation to Bid for a contractor to collect and properly dispose of the pesticides collected. Prospective contractors were required to bid on the basis of site safety and personal protection, collection, bulk packaging, transport, and disposal of the collected materials. Bids were received from four licensed hazardous waste contractors, and for FY 2004-2005 EQ Florida, Inc. (f.k.a. US liquids of Florida, Inc.) of Tampa, Florida, was selected as the contractor, with a bid of \$1.12 per pound cost for all collected materials. The contract was extended through FY 2008.

Under the terms of the contract, EQ Florida, Inc. provided all materials and services for collection, packaging, transport and disposal of the materials collected. Pesticides collected were handled under federal and state hazardous waste regulations applicable to the Universal Waste Rule and for the purposes of the program, DEP became the generator.

Members of the Steering Committee notified their membership as to the availability of the program. DEP maintains a web site that provides up-to-date information on the program. <http://www.dep.state.fl.us/waste/categories/cleansweepesticides/pages/20072008Results.htm>. Additionally, DACS made available a toll-free phone line specifically for people to call in for assistance in getting their pesticides picked up.

### Collection Methods

Collection methods remained similar to that of last year in that the majority of the pesticides were collected at the end-user's establishment. Randomly, at each site pick up, staff from the Department provided oversight and support. The contractor identified, weighed and characterized for disposal, all pesticides collected. Then, under the requirements of the Universal Waste Rule, The Contractor packed the pesticides for transport and final disposal. As part of the operation, Department staff distributed literature on safe pesticide handling and storage, and conducted a short interview with the participants to obtain information helpful in planning future Operation Cleansweep projects.

### Results & Participants

This year's collection was a success. The statewide participation count was **144**. This number represents ten different categories of pesticide users. Over **82,895** pounds of CSUP's were safely collected, transported out of the State of Florida and properly disposed of, thereby significantly reducing the threat of chemical accidents, public health and safety hazards to humans and livestock, or contamination of soil, surface water, or groundwater.

#### Participant Survey Percentage (out of **144** participants)

Golf Course	48%	Farming & Row-crop Farms	30%
Municipality	0%	Pest Control Operations	11%
Nursery	25%	Citrus	0%
Turf/Landscape	0%	Aquatic Applicators	3%
Other	19%	Parks	8%

A large part of the success of this program is due to the Institute of Food and Agricultural Sciences (IFAS) Agriculture Extension Service. A majority of the participants stated in their surveys that they were made aware of the Operation Cleansweep program through local extension meetings and information bulletins that were mailed out. A copy of the Operation Cleansweep bulletin is attached at the end of this report.

Additionally, the Department would like to thank Mike Whitten of United Agri Products. Mike provided assistance to this program by connecting many commercial growers with Operation Cleansweep in Tallahassee so that they could sign up for pick up. Additionally, United Agri Products provided our participants with a temporary drop-off location which was extremely helpful.

Many thanks to Jack Price and Raoul Clarke of the Florida Department of Environmental Protection for their knowledge and assistance with hazardous waste laws and regulations. Francie Stoutamire deserves much praise for the tiring maintenance and design additions of the webpage that details the history, progress and status of the Operation Cleansweep program. Additionally, Glen Perrigan, DEP, and the county small generator coordinators that do the site visits to verify that small quantity generators are properly managing their hazardous waste, helped to promote Operation Cleansweep. Irene Gleason, DEP, and the county household hazardous waste coordinators that run the county household hazardous waste collection programs, also assisted in program promotion at the county level. Their eagerness to assist in many ways to help the program is greatly appreciated.

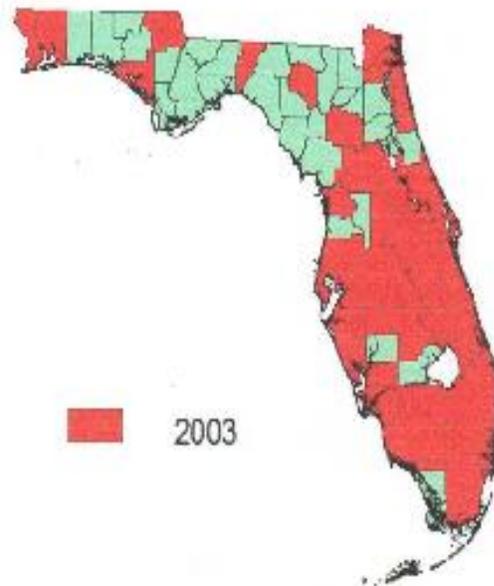

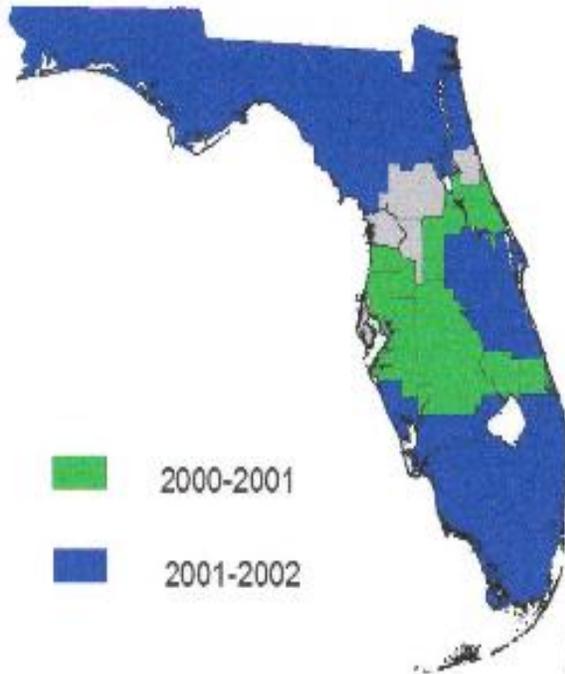

The author wishes to thank all of the Agriculture Inspectors and Supervisors within the Bureau of Compliance Monitoring and Bureau of Entomology and Pest Control who assisted in the field throughout the State, for their on-site supervision of the pickups and their assistance to many landowners with pesticide problems in the field. Also, thank you to the Field Supervisors for their patience and cooperation during the fast-paced collection season.

This report was prepared by Dale Dubberly, Environmental Manager, Operation Cleansweep Project Manager, Pesticide Compliance Office, Division of Agricultural Environmental Services, of the Florida Department of Agriculture & Consumer Services.
