Drycleaning Solvent Cleanup Program

Inspection Question	Statute Reference	Answer
Is the facility in the drycleaning solvent cleanup program?		
What is the Facility ID #?	376.303, F.S.	
Are dikes or other containment structures installed around each machine or item of equipment in which drycleaning solvents are used and around any area in which solvents or waste-containing solvents are stored?	376.3078(9)(a), F.S.	
If a spill occurred, did the owner or operator immediately upon the discovery of such a spill, initiate and complete actions to abate the source of the spill, remove product from all indoor and outdoor surface areas, remove product and dissolved product from any septic tank or catch basin in which the solvent has accumulated, and remove affected soils, if any?	403.161(11)(d), F.S.

AST/UST Questions

Inspection Question		Answer
Does the facility store boiler fuel, such as diesel, in a UST or AST (circle appropriate system)?		
Capacity in gallons:		
If AST > 550 gal, is it required to be registered under 62-762.301?	62-762.301(1)& 401.(1) F.A.C	
If UST > 110 gal, is it required to be registered under 62-761.300?	62-761.300(1) & 400(1). F.A.C	

Industrial Wastewater Standards

Inspection Question	Rule Reference	Answer
How is mop water managed? Are wastewaters that contain soaps, detergents, bleach, rust, etc. excluded from the treatment system in order to ensure that the filter is effective to treat the chlorinated solvents? (NOTE: Typically separator water treatment units should NOT be used for mop water without special filter screens for debris removal and an absence of soaps and ammonia in the mop water to prolong the filtration capacity of the carbon absorption filter)		
Are solvent-based pre-spotters excluded from use on garments that are being laundered in a system that discharges to a septic system?	62.600 F.A.C.	
Does the vacuum vent upward so that condensed solvent-containing water is returned to the vacuum tank rather than discharged onto ground?	403.087 F.S.	
Is the boiler configured so that no contact water (separator water or vacuum return water) is introduced and can be discharged to the ground during the boiler bleed-off?	403.087 F.S.	
If the facility discharges to surface waters, is it in compliance with its NPDES permit?	62.620 F.A.C.	
If the facility discharges to the ground, is it in compliance with a state permit?	62.620 F.A.C.	
If the facility discharges to sewer, is it in compliance with local sewer permit or local discharge limitations?	62.625 F.A.C.	
Is the facility on sewer other than a POTW?	64 E-G	
If a spill occurred and has the potential to reach the POTW, did the owner or operator notify the POTW in a timely manner?		

Best Management Practices (BMPs)

• Is entrance by unauthorized people restricted?		
• Does the storage area have appropriate signage?
